WORK EXPERIENCE

Front-End Developer Intern
Lets Grow More   *July/2023 - July/2023*
- Developed and launched four interactive projects using React during my internship at Lets Grow More.
- Created a dynamic to-do list web application for task management and real-time updates.
- Successfully implemented data fetching from APIs, showcasing proficiency in handling asynchronous operations and displaying live data.
- Designed & built a calculator application, providing users with a functional tool for basic arithmetic operations.
- Constructed a form application that enables users to submit data, which is displayed instantly on the page.

Full-Stack Developer Trainee
AttainU   *August/2022 - Present*
- Attained proficiency in MongoDB, Express.js, React.js, and Node.js through the completion of an intensive MERN stack training program at AttainU.
- Created various projects like Backend-project(hosted), User-authentication(hosted), Multiuser-blog-app(hosted) & many more using the core concept of MERN stack.
- Employed Git for version control, facilitating collaboration with team members and management of code repos.

Graphic Designer
Tamil Vidhaigal wedding Store   *February/2021 - February/2022*
- Employed expertise in CorelDraw software as a graphic designer, specializing in the design of wedding invitation cards, business cards, and brochures at the store.
- Transformed client ideas into visually appealing representations guaranteeing the client satisfaction..

EDUCATION

B.A (Bachelor of Arts)
School of Open Learning (Delhi University)   *- November/2020*

SKILLS

Tools and frameworks
JavaScript, Node.js, Express.js, MongoDB, React, React-router-dom, Redux-toolkit, Framer motion, Axios, HTML and CSS, Bootstrap, Tailwind CSS, Git & Github, RESTfull APIs, JWT

Professional skill
Full Stack development, Back-End development, Front-End development, Responsive design, Database management, Problem solving, Communication and collaboration, Continues learning, Adaptive

PROJECTS

MULTIUSER BLOG WEB APP (MERN Stack)
AttainU verified project   *June/2023 - June/2023*
- Developed back end of the project using Node.js & Express.js.
- Implementing secure password hashing with bcrypt, token-based authentication with jsonwebtoken, used cookie-parser for efficient cookie handling, and resource sharing management using cors.
- Managed image and video content through cloudinary and Implemented file upload functionality through multer.
- Utilized nodemailer for crafting personalized emails & sending them.
- Built the frontend with Vite and React, styled the application with Tailwind CSS, integrated dynamic routing using react-router v6+.
- Integrated notifications via react-toastify, managed API communication with axios, enabled rich text editing using react-quill and ensured efficient date formatting through date-fns.

USER AUTHENTICATION APP (MERN Stack)
AttainU verified project   *April/2023 - April/2023*
- Engineered backend functionalities with Node.js and Express.js, implementing secure password hashing, token-based authentication with JWT, efficient cookie handling, and resource sharing using cors.
- Managed image content through cloudinary, utilizing multer, sharp and blurhash for uploads, manipulation, and placeholders.
- Leveraged Mongoose for optimized MongoDB operations and streamlined data modeling.
- Generated personalized email content via the mailgen library and employed nodemailer for email sending.
- Developed the frontend using Vite & React, Styled the frontend with Tailwind CSS implemented Axios for backend requests, blurhash for image placeholders and react-toastify for notifications.

BACKEND PROJECT (Node & Express)
AttainU Verified Project   *March/2023 - March/2023*
- Designed a secure RESTful API using Node.js and Express.js and integrating the EJS template engine for dynamic server-side views.
- Implemented password hashing through bcrypt and employed JWT for token-based authentication.
- Skillfully utilized Mongoose, an ODM library for MongoDB, to ensure the optimization of database operations and the facilitation of streamlined data modeling.
- Retrieved data from MongoDB Atlas & dynamically rendered it in EJS.
